

STATISTICAL SURVEY ABOUT THE WATER

I asked to 26 people in my village where and what kind of water they drink:

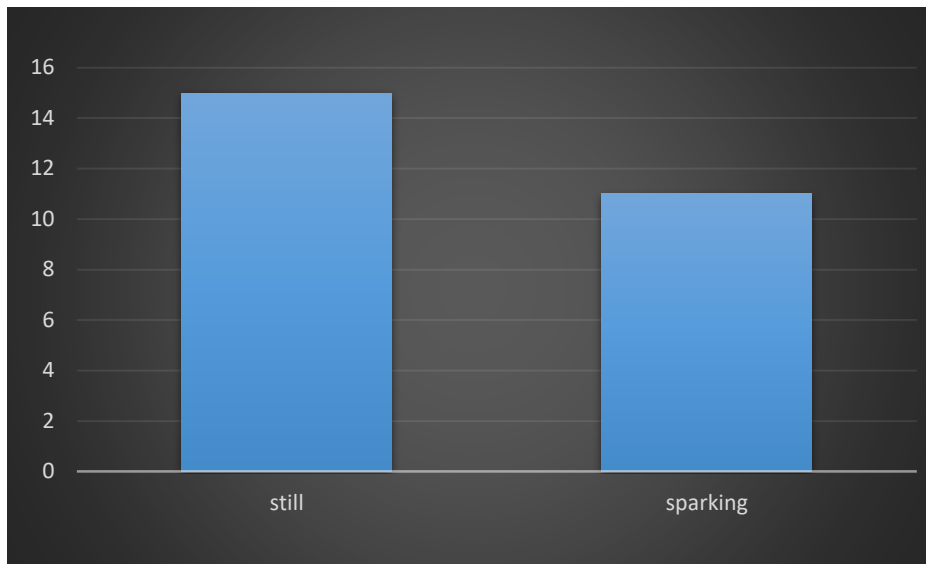

1) Where do you take the water?

	<i>Absolute frequency</i>	<i>Relative frequency</i>	<i>Percentage frequency</i>
TAP:	8	$8/26 = 0,30$	30%
SUPERMARKET:	18	$18/26 = 0,69$	69%
TOTAL:	26	0,99	99%

2) Do you drink sparkling or still water?

	<i>Absolute frequency</i>	<i>Relative frequency</i>	<i>Percentage frequency</i>
SPARKING:	11	$11/26 = 0,57$	57%
STILL:	15	$15/26 = 0,42$	42%
TOTAL:	26	0,99	99%

I live in a small village, Marano S/P. We aren't in mountain so our tap's water isn't so good and because of that there's a small percentage of people who drink it from the tap.
